先進の除菌 テクノロジー

Advanced Sterilizing Technologies

01 Air Shield Deodorizer

Air current creates a barrier within the bowl to prevent odors from escaping into the atmosphere while it powerfully removes odors.

02 Plasmacluster Technology

Plasmacluster ions kill bacteria across the entire surface of the bowl and remove odors completely.

03 Nozzle Sanitizer

Nozzles are disinfected with antibacterial silver ion water after every use. This action also prevents breeding of bacteria and keeps the toilet bowl clean.

04 Antimicrobial Protection

Antimicrobial additive containing silver ions is applied to the seat, cover, nozzle and remote control to effectively inhibit bacteria breeding. The seat is certified to SIAA ISO 22196 standard for antibacterial efficacy.

洗い心地を極めた 洗淨技術

Expert Care in Personal Cleansing

01 Exchangeable Nozzle Tip

Nozzle tip is removable for easy cleaning.

02 Dual Nozzles

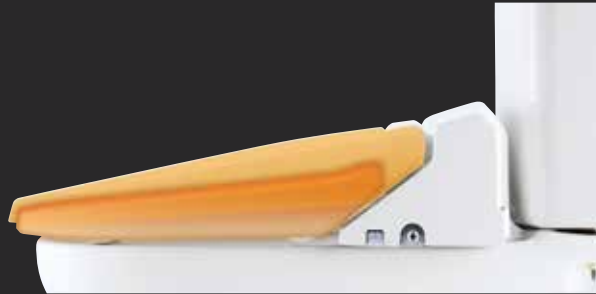

In addition to a rear cleansing nozzle, Passo features a separate feminine front nozzle for a gentle cleansing experience.

03 Nozzle Cover

Nozzles are stored away behind a nozzle guard when not in use - an effective way of keeping them clean. Nozzle guard can be removed for ease of cleaning.

04 Instant Heating

Instant heating system provides instant and constant warm water for comfort.

フルオート 機能

Fully Automatic Capabilities

01 Auto Open & Close Lid

Toilet lid opens automatically when you approach the toilet and closes as you walk away.

02 Pre-Mist Spray

Pre-mist bowl spray wets the interior surface of the toilet bowl before use, making it harder for waste stains to stick to the surface.

03 Power Saving

Conserves power by automatically lowering the temperature of both toilet seat and water when not in use.

洗練された 清掃性

Sophisticated Hygiene Solutions

PASSO Conventional Seat

01 Seamless Design

Seamless finish ensures dirt and bacteria will not be trapped in any joint. Seat is made of stain-resistant material so that any dirt can be easily removed with a simple wipe.
